

Field Trips by Dept. of Chemistry

Object : The primary objective of this trip to visit the Water plant is to learn purification of Water.

Outcomes : A plant tour provides an opportunity to observe how work actually gets done.

MEMORIES IN FIELD TRIP N P KUNTA SOLAR PROJECT

Objectivites : The main object to visit the Solar Power Plant is how to utilize the Renewable energy and improve the quality of life and alleviate rural poverty in the un-energized and off-grid areas.

Outcomes : They have to know how the Solar energy converted to Electrical energy. Solar-powered photovoltaic (PV) panels convert the sun's rays into electricity by exciting electrons in silicon cells using the photons of light from the sun. This electricity can then be used to supply renewable **energy** to your home or business.
